MANDOLIN TWIN

Thank you for buying the *Mandolin Twin*. This pickup system reproduces the true mandolin sound with very natural tone quality and in high volume without feedback problems.

This system does not require any alteration of your valuable instrument; all the components are installed with double side tape or self-adhesive fasteners. These devices will not harm the finish of your instrument and residues can be removed with WD40.

The *Mandolin Twin* works well in passive mode, if a preamp should be necessary we recommend our *Pure Preamp* or the *Powerpack Preamp*.

Please install the system as shown in the photo using the supplied double stick tape for the pickups.

The *Mandolin Twin* system is equipped with a multiuse endpin jack. This jack is designed to be installed on the outside of the mandolin (see photo) but it also allows for internal installation if desired.

The external-mount jack is attached with K&K's self-adhesive dual-lock system (similar to Velcro but much stronger). It can be indefinitely opened and closed without wear and tear and guarantees super holding power with absolutely no mechanical noise. Like this, the jack can be temporarily removed to fit your instrument into a form-case.

If internal installation is desired please contact your luthier. Internal installation requires special tools and skills. The pickups should be installed on the inside of the soundboard through the f holes or sound hole in approximately the same positions.

In this case please remove the "dual lock" fastener from the endpin jack and install the jack in the strap-knob location.

Technical Data:

Cable length: 11"

Pickup size: 16.5 x 23mm

Impedance: High ohmic

Jack: Stereo TRSS endpin jack wired mono
